*A GFCI is a sensitive device that reacts immediately to a small electric current leak by stopping the electricity flow.

*A GFCI can save your life! Compared to one now!

A GFCI can save your life! Don't wait...install one now!

A GFCI offers you far greater protection. A GFCI won't protect you under these circumstances. A regular fuse or circuit breaker won't protect you if the switch is off. A regular fuse or circuit breaker won't protect you if the switch is off. A regular fuse or circuit breaker won't protect you if the switch is off. A regular fuse or circuit breaker won't protect you if the switch is off.

while it's plugged in, the electric shock can kill water don't mix. If your hair dryer falls into water intake openings with a small brush or the brush allow to cool and clean dust and lint from air When cleaning is needed, unplug the cord, performance, the dryer must be kept clean. Your dryer is virtually maintenance-free. No

lubrication is needed. For proper operating rature and short. Inspect the cord frequently for high flex point of entry into the dryer, causing it to tightly around the dryer. Damage will occur at the twisted, or severely bent. Never wrap the cord NEVER allow the power supply cord to be pulled.

IF YOU MUST USE YOUR HAIR DRYER IN THE BATHROOM, INSTALL A GFCI NOW!

WHY DO YOU NEED A GFCI? Electricity and

now requires GFCIs in the bathrooms, garages, by your electrician. The National Electrical Code the electrical outlet or a permanent unit installed type is best for you – a portable unit that plugs into Your local electrician can help you decide which

and outdoor outlets of all new homes.

PRECAUCIÓN

NUNCA jale, retuerza ni doble mucho el cable. Nunca lo enrolle con fuerza alrededor del aparato. Esto podría dañar la junta flexible que lo conecta al aparato, produciendo su ruptura o un cortocircuito. Revise el cable con frecuencia para asegurarse de que no esté dañado. **Deje de usar el aparato inmediatamente si el cable parece dañado o si el aparato dejara de funcionar o funcionara de manera intermitente.**

Si el cable o el aparato estuviesen dañados o si el aparato no funcionase correctamente, regréselo a un centro de servicio autorizado. No trate de repararlo.

ALMACENAJE – Importante

Después de usar el aparato, desconéctelo, permita que enfríe y guárdelo en un lugar seco y seguro, fuera del alcance de los niños. **No enrolle el cable alrededor del aparato.** Permita que el cable cuelgue o que la junta que lo conecta al aparato esté suelta y recta.

INSTRUCCIONES DE MANTENIMIENTO

Su secador requiere poco mantenimiento. No necesita lubricación. Para que funcione correctamente, debe mantenerlo limpio. Cuando sea necesario limpiarlo, desconéctelo, permita que enfríe y quite el polvo y las pelusas de las aberturas de aire con un cepillo pequeño o el cepillo accesorio de una aspiradora. La superficie exterior del secador sólo se debe limpiar con un paño limpio.

El secador se recalienta si las aberturas de aire están bloqueadas u obstruidas. Si esto ocurriera, un sistema de seguridad apagará el secador o cortará la temperatura automáticamente para evitar daños al aparato o heridas. Si esto sucediera, desenchufe el aparato y permita que enfríe durante 10–15 minutos antes de encenderlo de nuevo. Asegúrese de que las ventilaciones de aire estén limpias.
